DROP IN TO WINTER

In anticipation of a season of big lines, deep powder, and vast backcountry, our team rolled north to the Powder Highway of Interior BC, testing our new gear in the heart of a legendary destination. This book is packed with products, images, and stories to inspire you to gear up for your own epic road trip.

LIVE YOUR ADVENTURE

POWDER HIGHWAY

FUELING YOUR STOKE FOR ADVENTURE IN INTERIOR BC

PACKING GEAR INTO THE TRUCK IS A WINTER RITUAL. From short weekends in local hills to lifetime journeys through legendary ranges, the experience of loading up your best gear in search of new terrain defines our seasons. With each new road trip, the gear list shifts and so do our destinations. But the constant intersection of the two is why our team loaded up the latest in Eddie Bauer innovations—such as the Neoteric, the Propellant, the Backdraft, and the Haines Pack—and hit the road for the Powder Highway of Interior British Columbia last winter.

Geographically defined by the mountain ranges and winding two-lanes that run north from the 49th parallel through the active towns of Nelson, Fernie, Rossland to

the Canadian crossroads of Revelstoke and Golden, this zone has earned legendary status for its stacked peaks and deep snow. The climate that draws passionate fans of winter also makes it the place for our Eddie Bauer team to test themselves against the terrain at locations such as Eagle Pass Heli or Revelstoke Mountain Resort, and test our guide-built gear against the elements in the Selkirks and Monashees. A quiver of relaxed styles also enabled them to slide comfortably into a thriving mountain culture. It all called us north last winter with an epic road trip to the heart of an active winter paradise. We hope the stories, images, and products in this book will inspire you to do the same...as soon as the snow starts to accumulate.

EDDIE BAUER GUIDE SCOTT NEWSOME PUTS OUR GEAR TO THE TEST, GUIDING IN THE BIRTHPLACE OF HELISKIING

For the last four decades, Revelstoke, BC, has been at the heart of heliskiing. Since the first Canadian heli op started shuttling skiers to the surrounding peaks in 1971, storm chasers have been drawn to the massive tenures, deep, light snowpacks, and stacked mountain ranges of the Selkirks and Monashees. Carved into a prime spot between two of the original ops is Eagle Pass Heli, the domain of Eddie Bauer snowboard guide Scott Newsome. Newsome earned his spot as owner/operator of Eagle Pass with status as the first fully certified ACMG splitboard guide and an impressive body of work in the heli industry, guiding both for clients and for top-tier pro athletes in his hometown BC peaks. He picked Eddie Bauer First Ascent as the exclusive outerwear supplier for his hard-working guides and his heli op.

In the Eagle Pass location known for constant, hammering storms, Newsome and his guides put our Eddie Bauer First Ascent gear to the daily test, with Newsome personally logging more than 140 days of guiding in our durable Heyburn kit and using the Haines Pack as his daily guide pack. It sounds like paradise, but it's a tough job, with 16-hour days the norm and long winters with no time off. But it's also the prime storm-hammered location to test our gear. "I put about 140 days a year on the Haines Pack and it's really durable," Newsome says. "It has all the bells and whistles that you need for a good guide's pack. The Monashees are my office and the Haines Pack is the briefcase I use in the mountains."

In this office, Newsome and Eagle Pass quickly earned a stellar reputation, with visits from marquee media crews such as Brain Farm, Absinthe Films, Candide Thovex, and Red Bull Media House, as well as an extended visit from Sherpas Cinema last season. This pro influx was due not only to Newsome's experience guiding for pro athletes and film crews, but also due to Eagle Pass allowing top-tier pros to tap into high-grade and challenging lines. Eddie Bauer athletes Wyatt Caldwell, Lexi DuPont, and Lynsey Dyer experienced this same flexibility and freedom at Eagle Pass last winter, putting the new First Ascent Neoteric, Backdraft, and Propellant styles to the test while landing to four days of stable bluebird after

a month of characteristically hammering Monashee storms.

Riding with Newsome, his Eddie Bauer First Ascent teammates tapped into high-alpine lines, wind-sculpted features, and big spine lines, with the freedom to test their professional skills and new First Ascent gear against expansive Monashee backdrops. But the terrain is what sets the experience apart.

"I've been to a lot of helicopter operations and this one is one of the most picturesque. As far as the scenics go, it is just mind-blowing," Dyer says. "The diversity of terrain they have here is over the top. They've got trees, they've got pillows, they've got spines, they've got the high alpine and it's just so beautiful. We skied chutes, we skied open faces, just some of the best powder I've had all season, as well as peaking into some spine lines. I wish that I had an endless budget because I would probably put it all here."

Notched into prime Monashee terrain, the 270,000-acre tenure of Eagle Pass features deep, dry Monashee snow, but it was originally overlooked as too rowdy for the old-school heli-ski crowd. But Eagle Pass saw a new focus as a prime zone for freeriders seeking out aggressive lines in challenging terrain rather than a hand-held luxury experience. "When clients come to Eagle Pass, the first thing I want them to leave with is sore legs," Newsome says. "We're about the skiing and the riding and getting out there and getting after it. We're not about the fluffy lodge life."

"You can't really get a better heliskiing tenure than Revelstoke. It's the mecca of heliskiing," Newsome says. "It's been that way for forty years and there's a reason for it. Eagle Pass was the last slice of heaven as far as operating tenure in Canada. It was one of the last gems out there."

"Scott made me feel at home and inspired me to be out there," says Caldwell about an epic road trip north that kept the Tailgate World Freeride Champ happily on edge. "He pretty much opened the door and gave us the key to the castle."

INTRODUCING NEOTERIC KIT

TRUE FREERIDE FREEDOM FROM THE MOST AIR-PERMEABLE WATERPROOF/BREATHABLE FABRIC

The holy grail of shell technology has been one that breathes as comfortably as a soft shell. With our new Neoteric shell, we've built a fully waterproof riding shell with exponentially increased airflow for complete core comfort when riding, hiking, touring, or charging hard. The technological secret is Polartec® NeoShell, the most advanced and most air-permeable waterproof/breathable shell fabric available. The result is our *Outside Magazine* Gear of the Year-winning freeride shell.

INTERVIEW

WYATT CALDWELL

EDDIE BAUER ATHLETE, IDAHO SLED-ACCESS SPLITBOARD CHARGER, AND TAILGATE WORLD FREERIDE CHAMP

» **WHERE DID YOU USE THE NEOTERIC SHELL?**

I used the Neoteric this winter in Idaho for a few cold splitboard trips before I put it to the test in Revelstoke, BC. It did very well against the elements in BC and I continued to use it during my two-month camper road trip up to Alaska until the end of April, as spring approached.

» **WHAT ARE THE MOST IMPORTANT CHARACTERISTICS FOR A SHREDDING SHELL?**

A solid shredding shell needs to have the ability to keep you warm and dry on the inside, no matter what wet or cold conditions the outer fabric is faced with. The shell fabric needs to allow your body to breathe easily right through the material, like the NeoShell does, and have a well-designed fit for flexibility.

» **WHAT MAKES IT DIFFERENT?**

The Neoteric is different because the unusually soft outer fabric still provides the durability and water resistance I need in the mountains. The Neoteric shell is also exceptionally breathable but still has the warmth to keep my core temperature comfortable all day long, even in flash heating situations like steep splitboard skins and bootpacking into lines.

» **HOW DID IT DEAL WITH DIFFERENT WEATHER AND DIFFERENT MODES OF ACCESS?**

The Neoteric is well equipped to deal with all weather conditions and environments for every aspect of snowboarding I do—from crisp, cold, Idaho winter mornings to the damp, wet weather of Interior BC and Alaska.

POLARTEC® NEOSHELL EXPONENTIAL AIRFLOW

The freest-flowing waterproof/breathable result for complete core-temp comfort during hard-charging, big-line riding.

FREERIDE MIGRATION

LEXI DUPONT SLAYS BIG LINES IN THE NEW MECCA OF GNAR

For decades Revelstoke was famous as the birthplace of heli-skiing, a nexus of snowmobile access and the epicenter of Canadian ski touring. Existing at the crossroads of the Monashees and the Selkirks, the town became a legendary destination for storm chasers due to its mix of massive terrain, steep peaks, and deep, light snowpacks.

But when the small one-chair ski hill transformed into Revelstoke Mountain Resort in 2007—offering the largest vertical drop in North America and access to world-class gnar in North Bowl—it instantly transitioned a working class ski town into the Canadian capital of freeride. Five years later, the town has not only attracted a new migration drawn by 5,620 feet of challenging RMR vertical, but also international fame as a seasonal stop for professional film crews and a venue for the World Freeride Tour each December, with legendary world-class lines in terrain

such as Separate Reality, North Bowl, and Mac Daddy Face.

Eddie Bauer athlete Lexi DuPont has both charged the World Freeride Tour and made Revelstoke Mountain Resort an annual stop on her pro filming circuit. "I'm always drawn back to Revelstoke. The last five seasons I've started my season in Revelstoke and it has just puked snow," DuPont says. "It is by far the best place to start the season if you are hungry for blower powder."

"The most challenging trip to Revelstoke for me is competing. I instantly get nervous just reflecting on the nerves that used to pump through me when I was competing up here," says DuPont, who came from qualifier status in 2010 to make the finals and finish in the top ten three straight seasons. "But it challenges everyone. I mean, that's why they have the contest. They bring athletes from around the world here every single season, which says something about this place."

▲ Lexi DuPont getting after it in Revelstoke, five seasons deep into her annual trips to the mecca

WEATHEREDGE® PLUS

✔ The jagged peaks and untouched snow of the Gold Range in the borderlands of Monashee Provincial Park

PHOTOGRAPHER: Rip Zinger

GOLD RANGE PROSPECTING

HELI GEAR DROPS AND PANTHEON BASE CAMPS IN BC

Winter touring trips are known as long slogs into remote places. But Eddie Bauer First Ascent guide and Eagle Pass co-owner Scott Newsome took advantage of Eagle Pass tenure for an extended five-day, seven-man splitboard trip into the remote and largely untapped Gold Range, on the boundary of Monashee Provincial Park. A largely undiscovered patch of alpine and old-growth wilderness between the Shushwap River and Upper Arrow Lake, the 22,700-hectare park holds 7,500-foot-plus peaks, stellar ski terrain, and close proximity to Revelstoke, BC. But the park presents difficult winter access.

"The Gold Range and the Monashee Provincial Park has a ton of stuff that's never been skied," Newsome explains. "There are just endless amounts of big lines and there are no mechanized vehicles or helicopters allowed in the park. It's a very remote park. There are no roads that take you into it. It's very remote and a pretty cool place."

Newsome and his crew of Canadian splitboarders solved the logistical challenge with a heli drop in Eagle Pass tenure on the border of the Provincial

Park. They shuttled in on two 30-minute flights from Revelstoke directly into the alpine, then set up a fully stocked base camp complete with a propane barbecue, a 48-pound, 8-foot tall **First Ascent Pantheon Dome Tent**, bottles of fine scotch, and more than a few flats of canned Canadian beer. They got stuck in a three-day giant foggy rime storm that dumped a meter and a half of snow. But with clearing skies they toured into the park, ticking off steep, exposed chutes that rarely get skied and logging 10,000 vertical in two days.

"On a traditional ski tour, every morning you're constantly packing up your gear and you're always moving through terrain. That type of trip doesn't allow you to scope more intricate lines and see the way the light shifts around throughout the day," Newsome summarizes. "Heli camping allows you to set up base camp, go climbing mountains, and then come back to your camp, beat and tired but with some luxuries of home."

"The Gold Range trip was a segue into what we want to eventually do with the operation," says Newsome. "Last year was the trial run."

“ HELI CAMPING ALLOWS YOU TO SET UP BASE CAMP, GO CLIMBING MOUNTAINS, AND THEN COME BACK TO YOUR CAMP, BEAT AND TIRED BUT WITH SOME LUXURIES OF HOME. ”

—Scott Newsome

» By definition, all lofted insulation is warm and lightweight. From down to synthetics, the combination of those two key characteristics is what makes the puffy such an indispensable, compressible part of our winter kits. But the drawback to traditional puffies is breathability, which is why we've partnered with Polartec to integrate their new Alpha technology into our latest, extremely breathable Propellant soft shell. Designed to add insulation without impacting breathability, the result is the most breathable soft shell we've ever built.

Alpha delivers warmth without weight and exceptional compressibility, yet it is constructed so that it doesn't impede the flow of moisture vapor. Developed for the US Special Forces, the technology evolved from a need for more mountain warmth but with an awareness of the practical restrictions against shedding layers during active missions. On the technical side, Alpha is a more stable lofted insulation, which enables it to be sandwiched between open-construction woven face fabrics for a more air permeable package. The additional airflow rapidly draws moisture away from the body and gives Alpha-insulated products greater active range for cool-weather, stop-and-go sports such as ski touring, alpine climbing, and mountain training.

Eddie Bauer athletes Lynsey Dyer and Wyatt Caldwell tested out the new Alpha technology on their Powder Highway trip last winter. Dyer put it to the test at Eagle Pass Heli, scrambling on rime-iced summits, while Caldwell benefited from the breathable synthetic insulation during storm days on Rogers Pass, then packed the piece north to Alaska, where he tested it at Tailgate and in the zones around Thompson Pass. In all those situations, the new shell delivered a comfortable core temp while on tour.

INTRODUCING

THE PROPELLANT

THE MOST BREATHABLE INSULATED SOFT SHELL WE'VE EVER BUILT

Traditional soft shells work great for fast-paced ski touring. But stand still without pulling out a puffy and you'll be shivering in a storm. At the same time, adding lofted insulation with its mandatory linings normally blocks out inherent breathability. Our Propellant solves both problems with a brilliant solution of Polartec® Alpha®—an extremely breathable and highly durable lofted insulation that functions between permeable fabrics. The result is an exceptionally breathable, insulated soft shell that lets the body breathe and adds warmth—a combo that won the design a coveted Apex Award.

PROPELLANT JACKET

Polartec Alpha, the latest in their breathable insulation science, helps make our new warm-up the ideal high-mobility piece for maintaining a comfortable core temperature when working hard in cold weather. Moisture-shedding stretch-woven shell regulates personal temps when cranking up output on cold, crisp days.

CORDURA
BRAND
F A B R I C

DURADOWN & CORDURA

TOUGH AS NAILS. WARM AS HELL.

Toughness is essential in the mountain professions. From guiding and logistics to heli pilots and snowcat mechanics, hard labor demands burly fabrics. The need for toughness and for warmth led us to create styles that blend the timeless lofted warmth of down with CORDURA®, one of the world's toughest textiles.

CORDURA was developed in 1977 as a 1,000-denier, air-jet-textured nylon yarn to add durability to backpacks. During the next three decades, the highly resistant fabric evolved into an entire class of tough textiles, utilized for everything from luggage, boots, and apparel to military and tactical applications. The performance details of CORDURA fabric are based on the exceptional strength-to-weight ratio of air-jet-textured yarns. The brand is now internationally synonymous with long-lasting durability, abrasion resistance, and dependability.

At Eddie Bauer, we've harnessed the power of CORDURA in working class styles that range from the Duradown collection to the Nail Driver Pants. The result is a crew of tough styles made to survive serious workday abuse for tasks that run the gamut from fueling up the Eagle Pass Heli and chainsaw pruning at RMI base camp to twisting wrenches on the ice in Antarctica, as well as surviving the rigors of the road on BC's Powder Highway.

WYATT CALDWELL

EDDIE BAUER ATHLETE, CAMPER RIG DRIVER, AND SLEDNECK MECHANIC

» WHAT'S GOOD ABOUT THE DURADOWN?

It's much better than traditional workwear because it incorporates StormRepel Down into a classic style that is normally made of cotton.

» WHY DOWN PLUS CORDURA?

Down and Cordura is the best mix because I spend so much time in below-zero weather gearing up for trips and working on tasks at hand.

» HOW DO YOU USE MOUNTAIN WORKWEAR?

It's great when I need to hook up a salt-rusted trailer, brush against my dirty truck, restock firewood, or work on greasy sleds. I wore them every day for 2 months when truck-camper living on a road trip from Idaho to Canada to Alaska.

[MEN'S]

FLANNEL MADNESS

WORLD'S BEST FLANNEL – TOUGHEST. THICKEST. SOFTEST.

When packing for a road trip, the flannel shirt is a piece that always makes the cut. Whether loading up seven different colors to survive long stints of laundry-less travel or just bringing two favorites and swapping them out for the duration, Eddie's Favorite Flannel is mandatory attire for just about every off-slope activity. On the Powder Highway, a tough, thick, and soft flannel is almost like the mountain town uniform. Apres celebration, evening steakhouse dinner, Canadian bowling competition, visits to the curling club, junior B hockey games, late nights at the town bar—you really can't name a social activity or road-trip task that doesn't meet the flannel dress code. So when our team headed north to Revelstoke, they loaded up on flannels, packing a full array of what we like to call a truly indispensable shirt for the road.

[1-4] EDDIE'S FAVORITE® FLANNEL SHIRT
This is the best flannel out there—at any price—bar none. Built with rich, two-ply yarns, then brushed on both sides for maximum softness. Garment-washed and specially treated to resist pilling, color loss, torquing, and shrinkage, even after 50 washings. Dual back pleats; button-down collar. Cotton. Relaxed fit is 2" fuller through the chest than our Classic fit; Slim is 2" trimmer.

THERMAL STOKE

RELAXED, RELIABLE WARMTH FOR LONG WINTER ROAD TRIPS

When packing for winter trips, one of the most versatile everyday pieces to pack is a classic thermal shirt. If the plan involves long weeks away or long stretches between laundry days, the number in our packs or duffels increases to stacks. The attributes of our thermals are many, but the combo of soft cotton and warm waffle-knit makes it the reflexive morning choice when heading out to breakfast,

[1-2] WHEAT HEATHER

[1-2] VINTAGE

[3] DARK LODEN

waxing up the skis, or gassing up the truck before hitting the highway. After action, nothing is easier to wear around a mountain town, a remote hut, or a plush lodge than a waffle-knit thermal. When it gets bitterly cold in places such as Revelstoke, Jackson, or Alaska, we layer it under a flannel shirt. But we always keep a grip of these ready for the road.

[1-4] SIGNATURE THERMALS

Best-in-class and bestselling. Premium cotton/polyester blend resists shrinkage and provides superior shape retention. Wear alone or use as a versatile layering piece. Reinforced shoulders; clean-finished interior collar. Classic fit.

INTRODUCING FREEDRY™ COTTON

EXCLUSIVE QUICK DRY TECHNOLOGY

FreeDry™ Cotton—utilizes microfiber technology that dissipates moisture and dries 50% faster than traditional cotton. The multi-component construction wicks moisture rapidly from your skin during heated activity to facilitate cooling, with yarn-specific properties that never wash out. This active transport also enables every piece constructed with FreeDry Cotton to shed moisture rapidly after a dip in the stream or a wash in the sink, making it the smart textile choice for extended road trips.

MOISTURE MANAGEMENT

From perspiration to precipitation, fighting moisture accumulation is critical to comfort during active endeavors. Our exclusive FreeDry technology utilizes fiber construction to facilitate wicking and drying for enhanced personal comfort.

QUICK DRY

FreeDry Cotton absorbs less moisture and won't oversaturate during activity due to the perfect blend of treated and traditional cotton yarns, enabling it to dry at least 50% faster than either untreated cotton or technical synthetics.

MOISTURE WICKING

FreeDry utilizes one-way moisture transfer, surface dissipation, and quick-dry performance to create a highly efficient, three-dimensional approach to moisture management that moves sweat actively and directionally away from skin.

BREATHABLE

FreeDry Cotton remains two degrees cooler than traditional polyester fabric as activity or temperature climbs, due to the natural cooling properties of cotton. The yarns also remain soft, not scratchy, on skin as a result of cotton's surface softness.

OUR EXCLUSIVE TRAVEX® FREEDRY™ COTTON DRIES 50% FASTER.

[1-3] LOOKOUT SHIRTS

Using FreeDry technology, our new cotton/spandex shirts have the comfort of traditional cotton, but with the breathable, moisture-wicking advantages of performance synthetics. And all the FreeDry features are inherent to the yarns, so they never wash out. Reflective Eddie Bauer logo at back neck; Travex logo at hem. Active fit.

DOWN TO CHILL

WARMTH AND STYLE FOR THE TIME BETWEEN THE ACTION

Eddie Bauer ski team rippers Lynsey Dyer, Lexi DuPont, and Lel Tone spend a lot of time in ski gear. But off the hill, these extremely talented skiers, who are fully confident on burly terrain, like to show a more feminine side. So it's no surprise that when their

time on the hill winds down, they often like to dress it up a bit in styles that express a different side of their character. One of their favorite pieces for that is the Northern Aurora, which is available in both vest and jacket styles. The face fabric's subtle sheen, the hood's faux-fur ruff, and the pastel colors all make our Northern Aurora the polar opposite of their on-hill uniform—the exact reason why they crave it in town.

[1-2] NORTHERN AURORA DOWN OUTERWEAR

Water-resistant nylon shell with 550 fill Premium Goose Down. Detachable hood and polyester/acrylic faux-fur ruff. Adjustable drawstring sides. Princess seams. Classic fit.

canadianavalanchecentre

CANADIAN AVALANCHE CENTRE

SETTING THE INTERNATIONAL STANDARD FOR PUBLIC AVALANCHE EDUCATION

Headquartered in downtown Revelstoke, BC, the Canadian Avalanche Centre is a non-government, nonprofit organization dedicated to public avalanche safety. Existing as the hub of Canada's national forecasting and public avalanche education efforts, the CAC coordinates public avalanche safety programs, oversees recreational avalanche courses, and develops the daily public avalanche bulletins that skiers, snowboarders, and snowmobilers depend on to travel safely in the backcountry.

✔ Eddie Bauer splitboard guide and CAA member Scott Newsome sleuthing out the weak layers in BC

PHOTOGRAPHER: Rip Zinger

The organization was founded in 2004 as a close cousin to the Canadian Avalanche Association, which gained increased public attention and support after the tragic avalanche fatality of former Prime Minister Pierre Trudeau's son, Michel, in Kokanee Glacier Provincial Park in 1998. Since that national call to arms, the CAA, which focuses on professional training and industry membership, and its sister organization, the CAC, which deals primarily with public education, forecasting, and recreational training, have set an international standard for progressive national avalanche education efforts.

For most winter recreationalists, the primary interaction with the CAC is through their regionalized daily avalanche forecasts, which have become a daily gospel for the vast majority of Canadian backcountry travelers. Yet nearly 6,000 students per year also benefit from the CAC's oversight when they take an Avalanche Skills Training course—either an AST 1 or AST 2—with a CAC-sanctioned provider. Above and beyond teaching standards and stability forecasting, the CAC has also made a name through innovative public education efforts, such as the graphical modernization of their daily avalanche bulletin, the development of their online avalanche course for first responders, new user-interface tools for backcountry decision making such as the Avaluator, and a terrain rating program that is gaining international attention. The combination of charge, vision, and support has earned the CAC a reputation at the forefront of global avalanche education and placed their Revelstoke headquarters at the heart of Canada's coordinated effort to keep its winter backcountry users safe.

EDDIE BAUER GIVES BACK 2% OF THE NET SALES FROM THE WINTER OUTFITTER BOOK WILL BE DONATED TO THE CANADIAN AVALANCHE CENTRE.

PUSHING PUBLIC AWARENESS

Avalanche education is a lifelong learning process, and the mission to educate the public about the danger that lurks is something that requires constant vigilance on all fronts. The Canadian Avalanche Centre has charged forward with an array of new tools and techniques in all three areas of forecasting, education, and training, bringing an integrated, nationalized approach to avalanche education that is setting a new standard for the industry. Constant progress in each area has resulted in greater public knowledge and a heightened level of awareness across Canada.

FORECASTING

The daily gospel for Canadian backcountry travelers, the CAC issues daily forecasts for 12 regions across Canada to help users understand the primary avalanche concerns on a regional scale, while using standardized language and infographics to effectively communicate the danger.

✔ The new phone-based daily bulletin

EDUCATION

With a mission to educate, the CAC utilizes every tool in the box to get the word out and improve decision making in avalanche terrain. From Public Avalanche Warnings, youth initiatives, and outreach programs to events, workshops, signage, and user tools, the CAC never stops spreading the word.

✔ CAC trailhead decision-making tools
GRAPHICS: courtesy of CAC

TRAINING

When Canadian skiers, snowboarders, and sledgers seek greater knowledge, the secondary-school step is the AST 1 and AST 2 courses delivered in the field by CAC-sanctioned providers, with CAC-developed materials that provide the foundations for understanding the science, weather, and behavioral aspects of avy safety.

✔ Learning slope science in an AST course

TIMELINE OF CANADIAN AVALANCHE EDUCATION

From early tragedy at Rogers Pass to international pro-level recognition, Canada's avalanche organizations evolve from their foundation in Revelstoke, BC.

1971	1981	2004	2006	2011
<p>FIRST PRO TRAINING. Canada's first pro-level avy training takes place at Rogers Pass—the national east-west corridor and historic site of its worst avalanche accident.</p>	<p>CAA AND INFOEX. The CAA is founded in Revy. One of its first tasks is the management of a new national database system for heli, cat, and ski operations to share data.</p>	<p>CAC FOUNDED. Growing from the roots of the CAA, a new centre is founded with a specific mission to focus entirely on public education, awareness, and forecasting.</p>	<p>AVALUATOR INTRO. The CAC better integrates terrain into the equation, ushering in a new era of decision-making tools to facilitate smarter personal risk mitigation.</p>	<p>GRAPHIC BULLETINS. The CAC launches its new icon-based avalanche bulletins, pushing forward a visually progressive look aimed at a generation raised on digital images.</p>

THE FROZEN DIMENSION

CAROLINE GEORGE RETURNS TO THE ICE WITH CHARGE AFTER A WINTER AWAY

For more than a decade, Caroline George has lived for the vertical dimension, tackling some of the hardest ice and mixed routes from the Alps and Ouray to Norway, Iceland, and the Canadian Rockies, as well as competing in the ice climbing world cup. But a one-year maternity leave from pure ice provided her with a new outlook on why she climbs these pillars and a newfound desire to return.

"In the past, my mind has wandered left and right, questioning the meaning of so much climbing, why I was doing it," George says. "But this year, something shifted: I realized that ice climbing wasn't just a hobby or a job. It was what feeds my soul. It felt like it was vital to me."

So during the 2013 winter, George and her family—including husband and fellow guide Adam George—embarked on a global ice tour. Packing leashless tools and a stack of synthetic puffies, they boarded a flight to the States. First they hit New Hampshire to tackle Cannon's Black Dyke and Fafnir, as well as classic East Coast routes such as Repentance, Remission, and Deidre. In this environment, Caroline started to feel an immediate pull to return. "I instantly felt in tune with the elements," she says. "I think it's partly due to the fact that as a parent, you don't have that much time and when you decide to do something, you give it your all." The George family then headed west, where Caroline climbed 7th Heaven in Provo, Utah, and competed in the Ouray Ice Festival. But the pinnacle of her return was when the family landed back in Europe, with perfect temperatures and once-in-a-decade routes coming into form just as her daughter started day care.

Climbing with Jon Bracey, Caroline ticked off Ilynx (WI6), a 5-pitch beauty with a stunning view of La Dame du Lac. She returned a few days later with Jon Griffith to climb the exposed and wild WI pillar that was first climbed in 1992 and has only come into form a few times since. The route featured three disconnected pillars,

a gigantic jaw-like feature, and an overhanging headwall that ended in an overhung roof. A week later George carried forward her momentum, partnering with Swiss alpinist Nicole Berthod to complete Crack Baby on Kandersteg's Breitwangflue (WI6), a sustained, tricky route with a step-over above 150 meters of exposure. She completed her return-to-ice season guiding the Patri in Cogne, Italy, and in Trient, Switzerland.

"I often get asked what draws me to ice," Caroline reflects on her return. "And maybe the answer is just that it makes me feel alive. I hadn't really missed it during my one-year hiatus, but when I swung my first axe, I realized how hungry the unfed worm had been."

WORLD OF ICE

TECHNOLOGY
PRIMALOFT ONE
HARNESSING ADVANCED SYNTHETIC INSULATION

» We know warmth. From natural down to synthetic lofted insulation, our guide-built First Ascent series features the most lightweight and efficient sources of insulation available. Yet moisture has always sapped the insulating properties of traditional down, which is why many of our athletes pick synthetic alterna-

tives when heading for coastal climates or wet environments. This mountain knowledge is why we've partnered with PrimaLoft® to form the warming core of our synthetic puffers.

PrimaLoft One—utilized in our Igniter, Accelerant, and Neoteric Insulated styles—is the most premium grade of PrimaLoft available. Ounce for ounce, PrimaLoft One provides the highest warmth-to-weight ratio of any available synthetic lofted insulation by harnessing the finest diameter fibers for maximum thermal performance and a softer, warmer, drier feel. Yet the ultimate result for sports such as ski touring, alpine climbing, and winter training is excellent thermal efficiency, superior water resistance, and warmth without bulk.

Originally patented as synthetic down and developed for the US military, PrimaLoft is an ultrafine microfiber insulation that replicates the lofted performance of natural down, yet insulates when soaked or saturated with moisture. Structurally, the ultrafine fibers create micro air pockets that trap body heat and keep cold out. Yet the microfibers are also engineered for weather resistance, with tight surface tension that resists moisture penetration and physically repels water molecules, making it four times more hydrophobic than typical polyester insulations. The fusion of all this tech provides maximum warmth, even in wet or stormy environments.

HARD SHELL NYLON WITH STORMREPEL® DWR ON FRONT, SHOULDERS, AND SLEEVES
Sheds light moisture during fast-forward activity

SOFT SHELL STRETCH NYLON W/ STORMREPEL DWR ON BACK AND SIDES
Provides accelerated core venting and unrestricted mobility

PRIMALOFT ONE 60-GRAM INSULATION
Premium synthetic fill provides warmth, even when wet

ZIPPERED TRICOT-LINED HAND POCKETS
Keep fingers from freezing

BREATHABLE STRETCH WOVEN LINING
Nylon lining wicks moisture and helps regulate internal temps

ELASTIC CUFFS AND DRAWCORD WAIST
Seal out cold updrafts

THE BACKDRAFT

THE BEST-EVER FUSION OF WARMTH AND BREATHABILITY. Most outdoor designs deliver on the performance of only one fabric: hard shells for waterproofing, soft shells for breathability, and puffers for compressible warmth. The Backdraft represents an engineered fusion of all three elements, combining the advantages of waterproofing and insulation in critical zones, yet also allowing total backflow venting and flexibility due to a full soft shell back panel. The biometrically targeted hybrid construction creates the ideal performance fusion of weather resistance, warmth, breathability, and flexibility for personal comfort during hard-charging activities in unpredictable weather.

BACKDRAFT JACKET

Nylon. Hard shell with StormRepel DWR on front, shoulders, and sleeves. Stretch soft shell with StormRepel DWR on back and sides. PrimaLoft One insulation. Breathable stretch-woven lining. Interior zip chest pocket with media port.

THE NEW SCHOOL OF LAYERING

WHAT YOU NEED FOR ANY WEATHER, ANY ENVIRONMENT, OR ANY ADVENTURE

For more than a decade, outdoor companies have preached the gospel of three-layer systems. But technology evolves and so do our options. We've embraced the modern concept of a loft layer by incorporating lightweight down or synthetic insulators into the standard base-, mid-, and shell-layer system for upgraded thermal versatility. Whether layered, as added warmth, packed in reserve for mandatory warm-ups, or integrated into a stormproof shell for the coldest climates, our down or synthetic loft layer creates a fourth dimension of comfort for long days exposed to the elements.

HARD SHELL SYSTEM

COMPLETE PROTECTION FOR MOUNTAIN STORMS

A hard shell system pairs a waterproof/breathable shell, a wicking base layer, and a fleece mid layer. It's still favored for full storm protection during exposed activities—skiing, snowboarding, or alpine climbing. On cold days or during long breaks, a loft layer adds an extra degree of layered warmth underneath any hard shell.

- BASE LAYER +
- * MID LAYER +
- ◆ LOFT LAYER +
- * HARD SHELL

Jacket, p14

PHOTOGRAPHER: Ben Dittio

SOFT SHELL SYSTEM

REGULATED COMFORT FOR ELEVATED ACTIVITIES

A soft shell system is built from stretch-woven material that sheds light precipitation without sealing off breathability or sacrificing mobility. It's ideal for backcountry touring, ice climbing, or Nordic skiing. Packing along a loft layer to function as an instant warm-up extends the thermal range of a soft shell system.

INTEGRATED SYSTEM

BEST OF BOTH WORLDS FOR UBER FUNCTIONALITY

An integrated system fuses the best of both the hard shell and the soft shell systems into one dynamic style. Worn over a base layer or a base- and mid-layer combo, an integrated system delivers the ultimate in warmth, simplicity, and storm protection in alpine base camps or the coldest interior ranges.

GUIDE BUILT. GUIDE TRUSTED.®

When Ed Viesturs layers for big peaks, he takes a meticulous approach. He starts with a synthetic base layer, then dials in his versatile system with an active fleece choice, such as the Hangfire Hoodie, which is his personal favorite in the First Ascent series.

Ed is a strong advocate of versatility in his system from the mid layer out. "You hear a lot about layering systems, but basically it is a number of clothing items that are worn in sequence on top of each other to provide more warmth and more protection," Viesturs says. "Rather than bringing one or two thicker layers, I like to bring more thinner layers. It gives me more versatility and variety in my layering."

HANGFIRE JACKET

A critical component of a three-layer alpine system, this apparel multi-tool is a superb mid layer for almost any mountain activity. Brushed polyester fleece torso and hood, with spandex added to the side panels and elbows. Interior wicking finish; anti-pill exterior. Superior breathability. Integrated hood. Active fit. Imported. MELISSA ARNOT

EDDIE BAUER GUIDE AND WOMEN'S
EVEREST SUMMIT RECORD HOLDER

» "The mountains provide a continuously shifting dynamic and an often unpredictable set of conditions, so layering is one of the defenses that I use for safety and comfort," Arnot says. "The mountain weather changes its mind all the time, so I just adjust my layers to match."

"When climbing at very high altitude, it is essential to layer to keep warm and safe," she continues. "I typically climb with two bottom layers and a base layer on top, with either a light soft shell or an insulated outer piece. In my pack there is ALWAYS a shell top and bottom, as well as extra lofted insulation."

» Melissa Arnot layering up with down during a rest and recovery break in the Himalayas

WARMEST

NATURAL THERMAL EFFICIENCY FOR THE HIGHEST DEGREE OF HEAT

» WHY IS DOWN WARM?

Long known as nature's best insulator, down provides more warmth per ounce than any other material. The technical explanation is that millions of fluffy filaments interlock and overlap to form a protective layer of trapped still air that keeps body heat in and cold air out. Due to the three-dimensional structure, each down cluster traps more air per ounce than traditional synthetics. In addition to its inherent insulating properties, it is also extremely resilient and highly compressible—giving it exceptional longevity and minimized thermal loss over time. Down also features breathability, enabling it to wick away perspiration, preventing clamminess during activity. The most common measurement for down is fill power, which measures its warmth-to-weight ratio. Generally, the higher the fill power rating, the more heat per ounce trapped by the down clusters. But the takeaway is that down is still the most efficient way to stay warm in the cold.

DEFINITION

FILL POWER

THE MEASURE OF THE LOFT OF AN OUNCE OF DOWN. THE HIGHER THE FILL POWER, THE MORE AIR PER OUNCE IT CAN TRAP.

“THE THOUGHTFUL QUILTING, CUT AND STYLING OF THE DOWNLIGHT MAKE IT MY CHOICE FOR EVERYTHING FROM RUNNING TO THE GROCERY STORE TO A LAYERING PIECE IN THE COLDEST WINTER STORMS. FOR ME, THE DOWN SWEATER IS THE BEST EXAMPLE OF SIMPLE MOUNTAIN SOPHISTICATION, WHERE FUNCTIONALITY MEETS STYLE PERFECTLY. I WISH I HAD A DOWNLIGHT FOR EVERY DAY OF THE WEEK.” —LYNSEY DYER

◆ LOFT LAYER

MICROTHERM™

THE ULTIMATE, ULTRALIGHT DOWN INSULATOR. A revolution in down construction, MicroTherm is the ideal weight for packing or using as a mid, last or emergency layer. 700 fill Premium Goose Down traps core heat while micro-channeled construction allows bulkless layering.

COLD, HARD FACTS

1.225KG/M³
APPROXIMATE WEIGHT OF AIR

FEW INSULATING MATERIALS CAN MATCH THE WEIGHTLESS FEEL OF AIR. DOWN CLUSTERS TRAP WARM AIR, WITH EXCEPTIONAL LOFT PER MATERIAL OUNCE.

“MY FAVORITE DOWN PIECE IS THE MICROTHERM BECAUSE IT IS LOW PROFILE AND EASILY LAYERS UNDER MORE WATERPROOF PIECES. IT'S ALSO LIGHTWEIGHT AND EASILY STUFFS IN A DAYPACK, BUT MOST IMPORTANTLY IT COMES IN A VARIETY OF GREAT COLORS AND COMPLEMENTS AN ACTIVE FEMININE SHAPE.” —LEXI DUPONT

INTEGRATED, INSULATED HOOD
Fits easily over ski/ climbing helmet

ERGONOMIC CHEST POCKETS
Double as heat-dumping vents

MICRO-BAFFLE CONSTRUCTION
Warmth with minimal weight and bulk

20D NYLON WATERPROOF/BREATHABLE SHELL
Rated to 20K/20K

WEATHER-SEALED ZIPPERS
Eliminate need for storm flaps

EDDIE BAUER DOWN

GUARANTEED

BEST

MANUFACTURED TO LEGENDARY TOLERANCES AND EXCEPTIONAL STANDARDS

» WHY IS DOWN THE BEST?

Skiers and climbers clearly pick favorites when it comes to insulation. But down remains at the pinnacle of lofted insulation due to the basic fact that no other material provides as much warmth for as minimal a weight as down. The lofted, three-dimensional structure of down makes it a natural solution to trapping body heat and creating a still air barrier to cold weather. For centuries, humans have used down for insulation and it still remains the best solution to staying warm without excess weight. Down retains its loft longer than synthetics, requires fewer resources to produce and, depending on the source, is allergen-free and more environmentally responsible. We source our down from the best possible suppliers and ensure that the goose down we use in our most technical styles far exceeds the standards required for its use.

COLD, HARD FACTS

BC MICROTHERM 2.0
2 IN 1. DOWN WARMTH PLUS WATERPROOF/BREATHABLE.

"...WITH THE EDDIE BAUER FIRST ASCENT BC MICROTHERM 2.0 DOWN JACKET, WET SNOW, SLEET, AND EVEN LIGHT RAIN ARE NON-ISSUES. UNLIKE MOST DOWN-INSULATED JACKETS, THE BC MICROTHERM IS FULLY WATERPROOF. IT HAS A DWR-COATED FABRIC THAT WATER BEADS ON. THE JACKET IS RATED TO THE SAME 20K/20K WATERPROOF-BREATHABILITY SPEC AS MANY TECHNICAL HARD SHELLS." GEARJUNKIE.COM

◆ INTEGRATED LAYER

BC MICROTHERM™

WATERPROOF, WARM, SUPERLIGHT DOWN. Our revolutionary, award-winning jacket provides full-on protection at a fraction of the expected weight. The lightest waterproof down jacket we've ever made, our fully waterproof/breathable, down-insulated shell packs small but excels in cold, wet weather.

WEATHEREDGE® PRO

STORMREPEL®
DURABLE WATER-REPELLENT FINISH

MOUNTAIN GUIDES IN TRAINING

HELI GUIDE SCOTT NEWSOME RAISES SKIERS IN REVELSTOKE

BY EDDIE BAUER GUIDE SCOTT NEWSOME

As a kid growing up in Lake Louise, Alberta, I could ski from the time I could walk. But in the '80s, snowboarding was just in its infancy, and this exciting brand-new sport captured my entire soul, allowing me to be creative in ways skiing never could. Although my father disapproved, I gave up skiing and became a full-on snowboarder. My dad was a man who skied on the Canadian national Nordic combined team, where Nordic cross-country, giant slalom, and 50-meter ski jumping were all practiced with wood and wire gear, with leather boots. He was not pleased at my choice.

Fast-forward a generation and around the time my first child was born, I was having a rekindled love affair with the ski. The creation of the splitboard opened up so many new possibilities in the backcountry for me. While training for my guides' exams with fellow splitboarders, a few of us became highly efficient downhill skiers in split mode with soft snowboard boots and bindings, motivated by the similar gear my dad used to launch off the 50m hill back in the day.

Like my father, I put my two boys—Sebastian, now 13, and Kaeson, now 10—on snow from the time they could walk. Teaching them both disciplines, I left it up to them to decide which path to choose. Apparently the snowboarding gene skips a generation. Both my boys chose the way of two planks, proving that against the grain of the old man is now a family tradition.

Snowboarding at first had a hard merger with traditional skier values and industry acceptance. The rivalry was evident throughout my entire snowboard career. Now, in this new generation, it really doesn't matter whether you ski, board, or split.

Now, when I have the chance to take my family out in the heli at Eagle Pass or go to the RMR, my wife and I snowboard and the kids ski. It's a truly cool dynamic because time together in the mountains as a family is priceless, no matter what you ride.

KIDS' SIZING: XXS=3/4; XS=5/6; S=7/8; M=10; L=12; XL=14

GET SPECIAL ATTENTION WITH AN EDDIE BAUER® CREDIT CARD

EDDIE BAUER® CREDIT CARD The Eddie Bauer® Credit Card account is issued by Comenity Bank. For any questions concerning your account, contact Eddie Bauer Cardholder Services at 1-866-507-6744 (TDD/TTY: 1-800-695-1788).

IF YOU ARE PREAPPROVED, THIS IS YOUR OFFER: SEE BELOW FOR OFFER DETAILS. Subject to Credit Approval. There are costs associated with the use of this credit card account. To obtain information about these costs, call us at 1-866-216-4928 (TDD/TTY 1-800-695-1788) or write to us at Comenity Bank, PO Box 182273, Columbus, OH 43218-2273.

IMPORTANT INFORMATION ABOUT OPENING AN ACCOUNT To help the government fight the funding of terrorism and money laundering activities, Federal law requires all financial institutions to obtain, verify and record information that identifies each person who opens an account. What this means for you: When you open an account, we will ask for your name, address, date of birth or other information that will allow us to identify you. We may also ask to see your driver's license or other identifying documents.

CUSTOMERS RECEIVING PREAPPROVED CREDIT OFFERS When ordering by phone, you may be selected for a preapproved account offer based upon the information in your credit report which satisfied our criteria for creditworthiness. If applicable, you must respond by the expiration

SEE REVERSE FOR ADDITIONAL INFORMATION.
